

TERM-seal

TERM-seal PRODUCTS

- TERM-seal Ura-Fen Active Perimeter System for new buildings
- TERM-seal Ura-Fen Shield TDB Perimeter System for new buildings
- TERM-seal Termite Resistant and Waterproof Coatings and Sealants for Internal Walls, Back-Filled Walls and Perimeter Systems on Closed Infill Construction
- TERM-seal Termite Resistant Sealants for Construction Joints
- TERM-seal Penetration Collars for Termite and Water-Proofing Penetrations in Slabs

TERM-seal is a new and innovative product developed for all termite and damp-proofing solutions. They are non-toxic and developed from inorganic compounds that come together to create a new and exciting method of termite resistance and waterproofing.

- * Kills and repels termites
- * Will last the Lifetime of the building
- * Unique 2 in 1 termite and waterproof barrier
- * 100% Australian Owned
- * Cost Competitive

TERM-seal

The Next Generation in Termite Management Solutions

**TERM-seal
Active Systems**

The revolution continues

TERM-seal Ura-Fen Active Perimeter Barrier

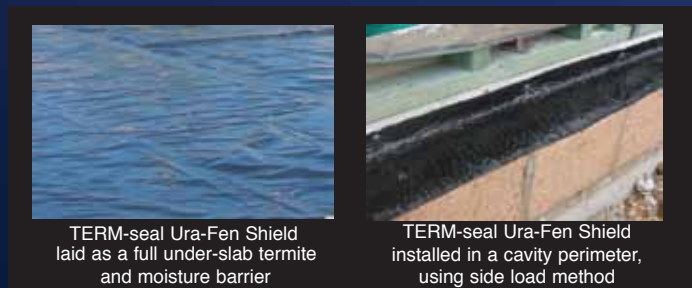

TERM-seal Ura-Fen Active (containing 0.2% - Bifenthrin) that kills termites is a new, cost effective Cavity Perimeter System. It has a lifetime of the building product warranty. And is installed by trained and accredited installers, as a one trip application, and ***doesn't require re-treatments.***

TERM-seal PRM Active cord Strip compliments the Ura-Fen and is industrial fabric impregnated with a TERM-seal compound to 700Um, that contains 0.1% Bifenthrin as active constituent, is specially designed to withstand the rigors of building movement and to act as a moisture, termite barrier combination.

TERM-seal Ura-Fen Shield TDB Under-slab and Perimeter Barrier

TERM-seal Ura-Fen Shield Termite and Damp-Coarse Barrier is a unique, new product that has been tested by the CSIRO, and is suitable as a damp coarse barrier when installed across cavities, and as a moisture/vapour barrier when installed as a full under-slab termite and vapour barrier. The barrier is highly UV stable, and designed to withstand the rigors of other trades.

TERM-seal Penetration Protection

TERM-seal Penetration collar protection can protect any size penetration through concrete slabs, regardless of size or shape. Our plastic collars fit 40mm, 50mm, 65mm, 80mm or 100mm DVW pipes.

All other odd size penetrations and pipe clusters are treated using void former that is removed after concrete is poured and TERM-seal Sealant Passive or TERM-seal Active Sealant is used to fill the void, forming a termite proof and water-proof seal to the penetration.

TERM-seal Active Sealant

TERM-seal Active Sealant is a no slump thixic compound, specially designed to cope with rigors of building and joint movement. The sealant kills and repels termites and is water-proof. It is used to adhere TERM-seal PRM Active Cord and capping Strips, and may be used to form a seal when joining metal ant capping. It can be used in virtually any situation where a termite resistant and water-proof seal is required.

TERM-seal Ant Capping

TERM-seal Capping Strips Brick Cord Strips, Sealant and Multi-Purpose Coatings (containing 0.1% Bifenthrin) are applied together ideally to form a termite and moisture barrier in all bearer and joist situations.

TERM-seal Multi-Purpose Active Coating

TERM-seal Multi-Purpose Active is the perfect termite water proofing combination and is applied as a two in one application. Applications include back filled walls, internal walls, cavities, joints and more.

TERM-seal Multi-Purpose Active can be used in many other situations such as:

- Concealed coving areas
- Planter boxes
- Enclosed stair wells
- Joints in concealed fire walls
- Coating joints on walls after sealing and re-enforcing
- Slab Edge
